New polynucleotide and polypeptides, useful for treatment and diagnosis of Alzhaher's Parkinson's, Huntington's, amylotrophic lateral solerosis, immune deficiencies, cancer, autoimmune disorders, multiple sclerosis, diabetes and allergies.

Claim 20; SEQ ID NO 319; 284pp + Sequence Listing; English.

The invention relates to an isolated polynucleotide (I) comprising one of 245 sequences (ABQ93288-ABQ93532). Treating a condition comprising administering to a mammalian subject a composition comprising the protein (II) encoded by (I) (ABP62809-ABP63053) or an antibody (III) to (II). (I), (II) and (III) are useful for diagnostic evaluation of disorders (I) is useful for gene therapy of diseases and (II) can be used for

```
ó
therapeutic treatment. Diseases that may be treated include wound healing and tissue repair, burns, central nervous system disorders (e.g. Albahmer's, Parkinson's by Huntington's and maylotrophic lateral sclerosis), immune deficiencies, cancer, autoimmune disorders, multiple sclerosis, diabetes and allergies. Note: The sequence data for this patent did not form part of the printed specification, but was obtained to. wipo.int/pub/published_pct_sequences

The invention relates to human Ras-like protein and its corresponding nucleic acid. The Ras-like protein and DNA is useful in the development of nucleic acid. The Ras-like protein and DNA is useful in the development of human therapeutics and diagnostic compositions. They are useful in the diagnosis, prevention and treatment of inflammation and disorders associated with cell proliferation and apoptosis, e.g. AIDS and other inflectious or genetic immunodeficiencies, neurodegenerative disease e.g. Alzheimer's disease, Parkinson's disease, wasting diseases e.g. cachexia, ischaemic injuries e.g. myocardial infarction, stroke or repertusion injury, toxin-induced diseases such as alcohol-induced liver damage or cirrhosis, osteoporosis or cancer. They are also used to treat disorders associated with inflammation including allergies, atopic dermatitis, atherosclerosis, asthma, anaemia, Crohn's disease, diabetes mellitus, catherosclerosis, asthma, anaemia, Crohn's disease, diabetes mellitus, catherosclerosis, strumm, or viral, bacterial, fungal, parasitic, proteozeal or haminthic infections. The antibodies of the invention are useful in the pharmacognomic analysis or for tissue typing. The transgenic animals are useful for studying the function of a Ras-like protein is used in drug screening assays and its activity. Ras-like protein is used in cargenic an human Ras-like protein is used in gene therapy. The present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     120

The invention relates to an isolated polypeptide. The polypeptide is useful for diagnosing a pathological condition or a susceptibility to a pathological condition in a subject, by determining the presence or amount of expression of the polypeptide in a biological sample and diagnosing a pathological condition or a susceptibility to a pathological condition based on the presence or amount of expression of the condition based on the presence or amount of expression of the perturbed by the presence or amount of expression of the polypeptide. Which involves contacting the polypeptide is also useful for identifying a binding partner and determining whether the binding partner ceffects an activity of the polypeptide. The polypeptide or the nucleic acid encoding the polypeptide is useful for preventing, treating, or ameliorating a medical condition, which involves administering the polypeptide or the nucleic acid to a mammalian subject. The nucleic acid a medical condition or a susceptibility to a pathological condition or a susceptibility to a pathological condition or susceptibility to a pathological condition or susceptibility to a pathological condition or susceptibility to a pathological condition or basence of a mutation. The polypeptide, the nucleic acid and an antibody to the polypeptide are useful acid and an antibody are useful as immunosuppressive agents, the nucleic acid and the antibody are useful as immunosuppressive agents, as adjuvants to enhance immune responses, and as agents to induce higher affinity antibodies and increase serum immunoglobulin concentrations. The protein. Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic format direct from the protein uspic organ/sequence. The sequence chimined in electronic format direct from the protein and an antipod or this patent did not form part of the protein.
                                                                                                                                                                                                                                                                                                                           New isolated polypeptide useful for diagnosing and treating immunosuppressive conditions such as autoimmune disease and Parkinson's

Leach M; Shimkets RA,

WPI; 2000-602362/57. N-PSDB; AAC75813. Novel nucleic acids and peptides derived from open reading frame X, disorders, useful for treating e.g. cancers, proliferative disorde neurodegenerative disorders and cardiovascular disease.

Claim 11; Page 1979-1980; 5507pp; English.

which represent the human ORFX open reading frames 1 to 3161. The ORFX sequences have activities such as: cytostatic; hepatotropic; vulnerary; antipsoriatic; antiparkinsonian; nootropic; neuroprotective; osteopathic; antiporiatic; antimarkintic; immunosuppressant; immunostimulant; cardiant; thrombolyvic; canduant; vasotropic; antidiabetic; hypotensive; dermatological; immunosuppressate; antiinflammatory; antibacterial; antiviral; antifrumatic; antiinflammatory; antibacterial; antiviral; antifrumgal; antirhenwatic; antithyroid; antibacterial; antiviral; antifrumgal; antirhenwatic; antithyroid; antibacterial; co, or preventing or treating pathological conditions associated with an ORFX associated disorder. The nucleic acids can be used to express ORFX proteins in gene therapy vectors. The proteins and nucleic acids may be used to treat cancers, proliferative disorders, neurodegenerative used to treat cancers, proliferative disorders, cardiovascular disease, diabetes mellitus, hypertension, hypothyroidism, cablesterol ester storage, systemic lupus erythematosus, severe combined immunodeficiency (SCID), AIDS, viral, bacterial or fungal infection, malaria, autoimmune disorders, asthma, allergies, aplastic anaemia, burns, wounds, bone and cartilage damage, nocturnal haemoglobinuria, antiinflammatory disease; to enhance coagulation; to inhibit thrombosis; and as a contraceptive

activity in an animal of one or more of the polypeptides given in the specification, a method for identifying a compound useful in treating pain and a pharmaceutical composition comprising the one or more polypeptides or their antibodies. The polymuclectide or the compound that modulates its activity is useful for preparing a medicament for treating pain (e.g. spinal segmental nerve injury (Chung), chronic constriction injury (CCI) and spared nerve injury (SNI)) in an animal (e.g. gene the specification) which is differentially expressed during pain. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic form directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

Ruben SM; Rosen CA, Barash SC, WPI; 2001-465460/50 N-PSDB; AAS27472. Novel polypeptides useful for diagnosing, treating, preventing and/or prognosing disorders related to the proteins, including cancers, immune disorders and neuronal disorders.

Claim 1; SEQ ID NO 1120; 880pp; English.

The invention relates to novel isolated polypeptides (I), and polymuclectides (II). (II) and the antibody to (I) are useful for diagnosing, preventing and treating diseases including immune system disorders (e.g. congenital and acquired immunodeficiencies, autoimmune

Barash SC Rosen CA, Ruben SM,

WPI; 2003-719985/68 N-PSDB; ADB93640 New isolated polypeptide useful for diagnosing and treating immunosuppressive conditions such as autoimmune disease and Parkinson's disease

Claim 11; SEQ ID NO 1120; 345pp; English

The invention relates to an isolated polypeptide. The polypeptide is useful for diagnosing a pathological condition or a susceptibility to a pathological condition in a subject, by determining the presence or amount of expression of the polypeptide in a biological sample and diagnosing a pathological condition or a susceptibility to a pathological condition based on the presence or amount of expression of the polypeptide is also useful for identifying a binding partner to the polypeptide, which involves contacting the polypeptide with a binding partner and determining whether the binding partner of effects an activity of the polypeptide. The polypeptide or the nucleic acid encoding the polypeptide is useful for preventing, treating, or ameliorating a medical condition, which involves administering the polypeptide or the nucleic acid to a mammalian subject. The nucleic acid is useful for diagnosing a pathological condition or a susceptibility to a pathological condition and subject, which involves determining the presence or absence of a mutation in The nucleic acid, and diagnosing a pathological condition or susceptibility to a pathological condition or susceptibility to a pathological condition or susceptibility to a pathological condition or susceptibility to a pathological condition or based on the presence or absence or the presence or absence of the mutation. The polype

```
disease, atherosclerosis, haemophilia, thrombocytopenia. The polypeptide, the nucleic acid and the antibody are useful as immunosupressive agents as adjuvants to enhance immune responses, and as agents to induce higher affinity antibodies and increase serum immunoglobulin concentrations. Present sequence represents the amino acid sequence of a novel human protein. Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic format direct from USPTO at seqdata.uspto.gov/sequence.html?DocID=20020168711.
                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental blology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABLiG176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB57737-
                                                                                                                                                                                                                                                                                                                                                                                        84 IMDTAGQERYQTITKQYYRRAQGIFLVYDISSERSYQHIMKMVSDVDEYAPEGVQXILIG 143

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New composition comprising two or more isolated polypeptides, useful for preparing a medicament for treating pain in an animal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention discloses a composition comprising two or more isolated or human polynucleotides or a polynucleotide which represents a fragmen derivative or allelic variation of the nucleic acid sequence. Also claimed are a vector comprising the novel polynucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a kit to perform the method, an array, a method for identifying an agent
                                                                                                                                                                       ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

that increases or decreases the expression of the polynucleotide sequence that is differentially expressed in neuronal tissue of a first animal subjected to pain, a method for identifying a compound which regulates the expression of a polynucleotide sequence which is differentially expressed in an animal subjected to pain, a method for identifying a compound that regulates the activity of one or more of the polynucleotides, a method for producing a pharmaceutical composition, a method for identifying a compound or small molecule that regulates the activity in an animal of one or more of the polypeptides given in the aptivity in an animal of one or more of the polypeptides given in the activity in an animal of one or more of the polypeptides or their antibodies. The polynucleotide or the compound that pain and a pharmaceutical composition comprising a medicament for treating pain and a pharmaceutical composition comprising a medicament for treating pain (e.g. spinal segmental nerve injury (SNI)) in an animal (e.g. gene the specification) which is differentially expressed during pain. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic form directly from WIPO at

Tang YT, Liu C, Drmanac RT;

2001-457740/49. N-PSDB; ABA09160 Human proteins and DNA encoding sequences useful for preventing, treating or ameliorating a medical condition in a mammalian subject e.g. arthritis and cancer

Claim 20; Page 276; 1963pp; English.

Sequences ABB10981-ABB12330 represent 1350 novel human polypeptides, and sequences ABB10981-ABB12330 represent nucleic acids encoding them. The invention also relates to vectors and recombinant host cells comprising a curleotide of the invention, methods of producing the novel polypeptides of the invention, methods of identifying compounds which polypeptides in a sample, and methods of identifying compounds which polypeptides of the invention have homology to known proteins, thereby giving an insight into their probable biological activities, and hence potential therapeutic applications. The polypeptides of the invention may have various activities, including cytokine, cell proliferation or cell inferential interapeutic applications. The polypeptides of the invention may have various activities, stem cell growth factor activity; immunomodulatory activity; tissue growth activity; cell interaction or cell invention activities; activity; tissue growth activity; immunomodulatory activity; activity; tissue growth activity; immunomodulatory activity; activity or inhibin-related activities; chrombotic cr chemokinetic activities; peeper or largand activities; or may be invocanced; or chemokinetic activities, polypeptides and nucleotides of the invention are useful for preventing, treating or ameliozating medical cancers, haemacopoletic disorders (e.g., mypopetides and nucleotides or cancers, haemacopoletic disorders (e.g., mypopetides and nucleotides or arterial ischaemia, bone disorders (e.g., mypopetides with factors), conditions (e.g., asthma or arthritis), creating ichaemia, bone disorders (e.g., mypopetides with growth, polypeptides involved with tissue regeneration and repair (or nucleic acids encoding them) may be used to promoce wound repair (or nucleic acids encoding them) may be used to promoce wound repair (or nucleic acids encoding them) may be used to promoce wound repair disease or activities and ulcers), when the growth. For example, such polypeptides with growth. For example, such polypeptides with grow

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention discloses a composition comprising two or more isolated rat or human polynucleotides or a polynucleotide which represents a fragment,
further be used for gene therapy, chromosome mapping, in the identification of individuals and in forenate analysis, and the polypeptides may be used as food additives or to prepare antibodies useful in disease diagnosis, drug targeting and phenotyping. The present sequence represents a human ovarian antigen of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                              75

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      pain (e.g. spinal segmental nerve injury (Chung), chronic constriction injury (CCI) and spared nerve injury (SNI)) in an animal (e.g. gene therapy). The sequence presented is a human protein (shown in Table 2 of The specification) which is differentially expressed during pain. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic form directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      1 MAKQYDVLFRLLLIGDSGVGKTCLLCRFTDNEFHSSHISTIGVDFKMKTIEVDGIKVRIQ

The invention discloses a composition comprising two or more isolated rat or human polynucleotides or a polynucleotide which represents a fragment, or human polynucleotides or a polynucleotide which represents a fragment, comprising the uncleic acid sequence. Also claimed are a vector comprising the novel polynucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a crass or decreases the expression of the polynucleotide sequence that is differentially expressed in neuronal tissue of a first animal subjected to pain, a method for identifying a compound which regulates the expression of a polynucleotide sequence which is differentially a polynucleotide sequence which is differentially compound that regulates the activity of one or more of the compound that regulates the activity of one or more of the compound for identifying a compound or small molecule that regulates the activity of one or more of the repression, a method for identifying a compound useful in treating especification, a method for identifying a compound useful in treating composition comprising the one or more of the specification, a method for identifying a compound useful in treating colypeptides or their antibodies. The polynucleotide or the compound that modulates its activity is useful for preparing a medicament for treating colypeptides or their antibodies. The polynucleotide or the compound comprising the modulates its activity is useful for preparing a medicament for treating colypeptides or their antibodies. The polynucleotide or the compound coliny (CCI) and spared nerve injury (SNI) in an animal (e.g. spin) colinity (CCI) and spared nerve injury (SNI) in an animal (e.g. spin) colinity is useful for preparing a medicament for treating colinity (CCI) and spared nerve injury (SNI) in an animal (e.g. spin) colinity by partined and partined for this patent did not form part of the printed condition) but was obtained in electronic form 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ë
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         61 IWDTAGOERYQTITKOYYRRAQGIFLVYDISSERSYQHIMKWVSDVDEYAPEGVQKILIG 120

```
Lung cancer associated polypeptide sequence SEQ ID 534.
```

associated proteins represented in AAB58106 - AAB58848. Lung cancer associated proteins and polynucleotide sequences, their agonists, and antagonists may have neuroprotective, cytostatic, cardioactive; and antagonists, machine neuroprotective; yulnerary; gastrointestinal general; nephrotropic; antiinfective; gynecological; or antibacterial cativity. The invention also includes antibodies specific for the protein or polynucleotide sequences. The lung cancer associated polynucleotide sequences. The lung cancer, chromosome cativity as chromosome markers, and for numerous other diagnostic or research purposes. The proteins may be used to treat diagnostic cardiovascular, renal, and proliferative discrders. The proteins may also be used in the treatment of wounds and infectious diseases. Polynucleotide sequences AAF18425 - AAF18433 and peptide AAB58549 are used in the course of the invention for the identification and 44 MAKAYDHLFKLLLIGDSGVGKTCLIIRFAEDNFNNTYISTIGIDFKIRTVDIEGKKIKLQ 103 61 IMDTAGQERYQTITKQYYRRAQGIFLVYDISSERSYQHIMKWVSDVDEYAPEGVQXILIG 120 121 NKADEEQKRQVGREQGQQLAKEYGMDFYETSACTNLNIKESFTRLTELVLQAHRKELEGL 180 cardioactive; immunomodulatory; muscular active; vulnerary; asstrointestinal; nephrotropic; antiinfective; synecological; antibacterial; diagnosis; neural disorder; immune disorder; reproductive; proliferative disorder; wound healing; infectious disease. 1 MAKQYDVLFRLLLIGDSGVGKTCLLCRFTDNEFHSSHISTIGVDFKMKTIEVDGIKVRIQ 60 Lung cancer associated gene sequences, referred to as lung cancer antigens, useful for treatment, prevention, and diagnosis of disorders such as lung cancer. Polynucleotide sequences AAF17982 - AAF18424 encode human lung cancer 43; Indels 18; Gaps cancer associated protein; neuroprotective; cytostatic; characterisation of the polynucleotide and protein sequences Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                     Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 19,

Patent No. 5840683
GENERAL INPORMATION:
APPLICANT: Placus, Matthew R.
APPLICANT: Abajian, Henry B.
APPLICANT: Rabajian, Henry B.
APPLICANT: Rode, Andrew S.
TITLE OF INVENTION: Peptides Inhibiting the Oncogenic Action TITLE OF INVENTION: of P21 Ras
NUMBER OF SEQUENCES: 52
CORRESPONDENCE ADDRESS:
ADDRESSEE: Greenlee and Winner, P.C.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Length 198;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 31; Indels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC Compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: Patentin Release #1.0, Version #1.30
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/531,525
FILING DATE: 21.5EP-1995

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   9
     Sequence 2, Application US/09817198A

Patent No. US20020146758A1

GENERAL INFORMATION:

APPLICANT: YE, Jane et al.

TITLE OF INVENTION: NUCLEIC ACID MOLECULES ENCODING THESE HUMAN RAS-LIKE

TITLE OF INVENTION: PROTEINS, AND USES THEREOF

FILE REFERENCE: CLO01188

CURRENT APPLICATION NUMBER: US/09/817,198A

CURRENT FILING DATE: 2001-03-27

NUMBER OF SEQ ID NOS: 33

SOFTWARE: FastSEQ for Windows Version 4.0
                                                                                                                                                                                                                                                                                                                                                                                                                                         9
                                                                                                                                                                                                                                                                                                                                                                                                                                                              1 MAKQYDVLFRILLIGBSGVGKTCLLCRFTDNEFHSSHISTIGVDFKMKTIEVDGIKVRIQ

Sequence 1571, Application US/09925300

Patent No. US2020151681A1

GENERAL INFORMATION:

APPLICANT: Craig Rosen,

APPLICANT: Steve Ruben,

TITLE OF INVENTION: Nucleic Acids, Proteins and Antibodies

TITLE OF INVENTION: Nucleic Acids, Proteins and Antibodies

FILE REFERENCE: PA101

CURRENT APPLICATION NUMBER: US/09/925,300

CURRENT APPLICATION NUMBER: PCT/US00/05988

PRIOR PILING DATE: 2001-08-10

PRIOR PILING DATE: 1999-03-12

NUMBER: OF SEQ ID NOS: 1899

SOFTWARE: PatentIn Ver. 2.0
